Deccan Education Society’s  
FERGUSSON COLLEGE (Autonomous), PUNE - 411004

Two Years  
M. Sc. Degree Course in Chemistry  
(Analytical Chemistry)

SYLLABUS  
Semester – III and IV

Second Year M. Sc.  
[Analytical Chemistry]

[Academic Year : 2017-2018]
### Term / Semester | Name of the Paper | Title of Paper | Theory Credits | No. of Lectures / Practicals
--- | --- | --- | --- | ---
#### Semester III
| CHA5301 | Electro analytical and Radio analytical Techniques | 4 | 60 |
| CHA5302 | Pharmaceutical Analysis | 4 | 60 |
| CHA5303 | Extraction and Atomic spectroscopic Techniques | 4 | 60 |
| CHA5304 | Elective Papers : Any Two |  |  |
| CHA5305 | Metallurgy and Analysis of Cement | 2 | 30 |
| CHA5306 | Geochemical and Agrochemical Material Analysis | 2 | 30 |
| CHA5307 | Analytical Chemistry Practical V (Industrial materials Analysis) | 4 | 15 Practicals |
| CHA5308 | Analytical Chemistry Practical VI (Analysis of Bioanalytical fluids) | 4 | 15 Practicals |
| CHA5309 | Self-Learning Course-3 | 1 | 15 |

#### Semester III : Credits
25

### Term / Semester | Name of the Paper | Title of Paper | Theory Credits | No. of Lectures / Practicals
--- | --- | --- | --- | ---
#### Semester IV
| CHA5401 | Forensic science and Food Analysis | 4 | 60 |
| CHA5402 | Analytical spectroscopy. | 4 | 60 |
| CHA5403 | Polymer science | 4 | 60 |
| CHA5404 | Elective Papers : Any Two |  |  |
| CHA5405 | Bioanalytical methods. | 2 | 30 |
| CHA5406 | Pollution monitoring and control | 2 | 30 |
| CHA5407 | Nanotechnology | 2 | 30 |
| CHA5407 | Analytical Chemistry Practical VII (Analysis of Consumer products) | 4 | 15 Practicals |
| CHA5408 | Analytical Chemistry Practical VIII (Analysis of food and pharmaceutical products / Project) | 4 | 15 Practicals |
| CHA5409 | Self-Learning Course-4 | 1 | 15 |

#### Semester IV : Credits
25

**Semester III**

**Course Code:** CHA5301  
**Course Title:** Electro Analytical and Radio Analytical Techniques  
**(4 Credits)**

**Objectives:**
1. To study the basics of electrochemical reactions.
2. To understand the concept of Faraday’s law.
3. To know principle, instrumentation and applications of different electroanalytical techniques.
4. To know importance of Ilkovik equation.
5. To understand the concept of Radio analytical method of Analysis.
6. To know principle, instrumentation and applications of Activation analysis.
7. To know principle, types and applications of IDA.
8. To know principle, types and applications of Radiometric Titrations.
9. To understand basic concepts of Thermal methods of Analysis.
10. To study instrumentation of Thermo gravimetric methods of analysis.
11. To understand the factors affecting Thermo gravimetric methods of analysis curve.
12. To understand application of DTA.
13. To know principle and instrumentation of DSC.
14. To understand concept of Thermometric Titrations and EGA.

<table>
<thead>
<tr>
<th>Unit-I</th>
<th><strong>Coulometry:</strong> Current voltage relationship during an electrolysis, Operating cell an at fixed applied potential, Electrolysis at constant working electrode potential, Coulometric methods of analysis, Faradays laws of electrolysis, Instrumentations-Constant current and constant voltage instruments, potentiostatic coulometry- Instrumentation and applications, Coulometric titrations (Amperostatic coulometry)-Apparatus and applications, advantages and limitations, problems. Specific Applications of Coulometry.</th>
<th>6L</th>
</tr>
</thead>
</table>

| Unit-II | **Voltammetry and Polarographic Methods of Analysis**  
   **a. Polarography** (linear scan polarography): Polarographic principles, Instrumentation (different types of microelectrode such as dropping mercury electrode, the static drop mercury electrode, rotating disc and ring disc electrode, cell for polarography, reference and counter electrode and circuit diagram), polarogram and polarographic currents, charging or capacitive current, role of supporting electrolyte, factors affecting on polarographic wave, Ilkovic Equation, advantages and disadvantages of DME, polarographic maxima and maxima suppressors, interference due to dissolved oxygen, Applications (qualitative analysis, quantitative analysis by calibration curve and standard addition methods), specific examples of analysis – analysis of Cu, Cd, Zn, Pb, etc. from tap water and alloys., problems. Specific Applications of Voltametry and Polarography.  
   **b. Hydrodynamic voltametry** and applications of hydrodynamic voltametry (volatametric detectors in chromatography and flow injection analysis, Voltametric oxygen sensors, amperometric | 18L |
titration), Rotating Disc Voltametry, Rotating Ring Disc voltametry, Flow through Voltametry, Specific Applications.

c. **Pulse Polarography**: Different types of excitation signals in pulse polarography, Differential pulse polarography, square wave polarography, Stripping method. Voltametry with ultra microelectrode, Applications of these technique Cu and Zn from tap water by differential pulse polarography and by square wave polarography, Vitamin-C by differential pulse polarography, Determination of Pb in tap water by stripping method), Specific Applications.

d. **Cyclic Voltametry**: Principle of cyclic Voltammetry, cyclic voltamogram of K₃[Fe(CN)₆], and parathion, criteria of reversibility of electrochemical reactions, quasi reversible and irreversible processes. . Randles Sevcik equation, Cyclic Voltametry on modified electrode, Cyclic Voltametry of aromatic compounds, Electron transfer followed by Chemical reaction (EC mechanism), specific applications.

e. **Amperometry**: Principle, instrumentation, typical applications, amperometric titrations, chronoamperometry and chronopotentiometry, specific applications.

### Unit-III

**Radioanalytical Methods of Analysis**

a. **Activation analysis**: Neutron activation analysis, principle, technique, steps involved in neutron activation analysis. Radiochemical and instrumental methods of analysis, important applications of NAA.

b. **Isotope Dilution Analysis**: Principle, types of isotope dilution analysis, typical applications of isotope dilution analysis.

c. **Radiometric Titration**: Principle, techniques based on complex formation & precipitation, radiometric titration curves for estimation of ions from their mixture.

### Unit-IV

**Thermal Methods of Analysis**

a. **Thermo gravimetric methods of analysis**: Instrumentation, thermogram and information from thermogram, factors affecting thermogram, applications TGA for quantitative analysis (TG analysis of CaC₂O₄ H₂O, CuSO₄5H₂O, dolomite ore, etc.) and problems based TGA.

b. **Differential Thermal Analysis (DTA)**: Instrumentation, general principles, differential thermogram, DT and TG curve together, Applications (DT analysis of mixture of polymers, DT analysis of CaC₂O₄ H₂O, DT analysis of sulfur, DT analysis of CuSO₄ 5H₂O). TG and DT curve for Mn(PO₄)₂ H₂O.

c. **Differential Scanning Calorimetry (DSC)**: Principle, Instrumentation, and Applications (DCS curve of polyethylene terphthalate, DSC curve for isothermal crystallization of polyethylene, DSC of phenacetin), thermometric titrations, Evolved gas analysis.

7. Cyclic Voltammetry and frontiers of electrochemistry by N. Noel and K. I. Vasu IBH, New Delhi (1990)
Course Code: CHA5302  
Course Title: Pharmaceutical Analysis  
(4 Credits)

Objectives:
1. Requirement of bioassay.
4. Preliminary testing of test sample
5. To understand the concept and determination of Limit test for different pharmaceutical substance
6. To understand concept of Membrane filtration technique
7. Knowledge about adulteration misbranding
8. How to read labels and its importance
9. Information about IND and NDA
10. Importance of sterilization.
11. To learn different Pharmacokinetics and Pharmacodynamics effects of drugs on human body.
12. Precautions needed to be taken while processing pharmaceutical product.
13. Importance of pharmacopeia.
14. To formulate Karl fischer reagent and standardisation.
15. Types of aerosols.

## Unit IV

**Assay:**

**a. Biological Assays:** Introduction to biological assay, Biological assay of Heparin sodium, Determination of Amylase activity, Test for Undue Toxicity.

**b. Microbiological Tests and Assays:** Microbiological test for Antibiotics, Cylinder-plate assay receptacles, Turbidimetric or tube assay methods, Assay Designs, Cylinder plate or Cup-plate method, Pour plate method, surface spread method, Most probable number method, Two level fractional assay.

## Unit V

**Pharmacology: Pharmacokinetics and dynamics**

**a. Introduction and importance, dose response relationship**

**b. Pharmacokinetics:** Definition, ADME process and pharmacokinetics models

**c. Pharcodynamics:** Definition, Drug receptor interaction, receptor binding effect

## Unit VI

**Sources of Impurities in Pharmaceutical Raw Materials & Finished Products, Shelf Life of Pharmaceutical Product:** Raw materials, Method of manufacture, Atmospheric contaminations, Cross contamination, Microbial contamination, Container contamination, Packaging errors, Chemical instability, Temperature effect and Physical changes, shelf life of Pharmaceutical product and determination of shelf life. Water for pharmaceutical use.

**Limit test:**
Limit tests for aluminium, arsenic, iron, lead, potassium, sulphate, chloride, heavy metals

## Unit VII

**Analysis of Vegetable Drugs:** Sampling, foreign organic matter, test for complete extraction alkaloids, ash value, acid soluble ash, acid insoluble ash, sulphated ash, Extraction of alkaloids. Loss on drying loss on ignition.

Course Code: CHA5303  
Course Title: Extraction and Atomic Spectroscopic Techniques  
(4 Credits)

Objective:
1. To understand principle behind extraction techniques.
2. To understand principle of liquid-liquid extraction techniques.
3. To identify method of selection of solvents for LLE.
4. To understand principle of Solid Phase extraction.
5. To know principle of Solid phase micro-extraction.
6. To learn about Methods of analysis: SPMEGC, SPME-HPLC-MS.
7. To acquire knowledge of advance automation of SPME.
8. To know principle of microwave assisted extraction.
9. To learn about instrumentation methods of microwave assisted extraction.
10. To study application of microwave assisted extraction.
11. To understand principle of supercritical fluid extraction.
12. To understand Theory, principle, instrumentation and applications of atomic spectroscopic techniques.
13. To learn about Methods of introducing sample in atomic spectroscopic instrumentation.
14. To understand Theory of Flame atomizer
15. To understand construction and working of LASER.
16. To study application of LASER with respect to AFS analysis.
17. To know instrumentation of Resonant Ionization Spectroscopy.

1. Estimation of aspirin content from tablet by conductometric titration with standard solution of NaOH.
2. To determine concentration of sulphuric acid, acetic acid and copper sulphate by conductometric titration.
3. Determine ionisation constant of indicator using spectrophotometer.
4. Determination of Na from water sample by flame photometry using calibration curve and standard addition method.
5. Determination of K from water sample by flame photometry using calibration curve and standard addition method.
6. Determination of sulphate ion by turbidimetry using calibration curve method.
7. Determine chloride from water sample by Nephelometry.
8. Determine concentration of sodium and potassium from binary mixture by flame photometry.
9. Estimation of micronutrients from food by AAS (any two elements from Fe, Cu, Zn, Mn, Mo, B etc)
10. Determination of Cu and Zn in brass alloy by polarography
11. Determination of diffusion current from cyclic voltamogram of $K_3Fe(CN)_6$.
12. Analysis of Dolomite for Si, Ca and Mg
13. Analysis of Magnalium for Al and Mg
14. Analysis of bauxite for Si and Al
15. Analysis of Plaster of Paris for Ca by KMnO$_4$ method.
16. Estimation of Mg from Milk of Magnesia.
17. Estimation of Phosphorus from fertilizer.
18. Determine amount of magnesium from given talcum powder
19. Determination of Nitrogen from Fertilizer by Kjeldhal’s method.
20. Determination of organic carbon in soil
21. Analysis of Iodine value from oil.
22. Analysis of pesticide residue by Gas Chromatography.

Scheme of Analytical Chemistry Practical Examination
CHA5307: Practical Course I: Industrial Materials Analysis (Any Fifteen)
CHA-5308: Practical Course II: Analysis of Bioanalytical Fluids Practicals (Any Fifteen)

Note:
1. The practical examination in the subject will be conducted for SIX HOURS duration.
2. The practical examination in the subject will be conducted for 50 marks.
3. Certified Biochemistry Laboratory Journal is compulsory for the examination.
4. Oral/viva examination is compulsory
5. Book/s printed material, cyclostyled or typed material will be allowed during the practical examination.
6. Examiners will arrange Q1 and Q2 experiments for conducting practical examination.
7. Lucky draw system will be followed for the students for practical examination by the examiners.
8. Log table and calculators are allowed during the practical examination.
9. Mobile/s is/are strictly not allowed during the practical examination in laboratory.

The candidate has to perform the following question/s for practical examination.

| Q 1 | Major Experiment (Any ONE) | 20 Marks |
| Q 2 | Minor Experiment (Any ONE) | 20 Marks |
| Q 3 | Oral/Viva | 05 Marks |
| Q 4 | Laboratory Journal | 05 Marks |
| Total Marks | | 50 Marks |
Semester IV

Course Code: CHA5401
Course Title: Forensic science and Food Analysis
(4 Credits)

Objectives:
1. To understand role of forensic science in crime investigation.
2. To know importance of toxicology and its role.
3. To know different methods of isolations of poisons from body fluid
4. To understand different terminologies in Narcotics.
5. To give an introduction to forensic analysis.
6. To study methods of DNA Profiling, alcohol in body fluids, drug identification, blood analysis, fingerprint analysis and explosives analysis.
7. To understand concept of food preservation and processing.

Unit III

Food Analysis:

a. Analysis of food: Milk and milk products, tea, coffee and beverages. Flour, starch, honey, jams and edible oils.

c. Food processing: Refining milling, canning, concentration, freezing Drying, irradiation, pasteurisation, and sterilization.

**Course Code: CHA5402**  
**Course Title: Analytical Spectroscopy**  
(4 Credits)

**Objectives:**
1. To understand the concept of different spectroscopic techniques.
2. To know principle and instrumentation of electron spectroscopy, chemiluminescence, fluorescence and phosphorescence, surface characterization techniques and XRD.
3. To understand applications of spectroscopic techniques.

2. Instrumental methods of chemical analysis by Willard, Dean and Merittee- Sixth edition.
8. Solid state chemistry by D K Chakrabarty.
9. Instrumental analysis By Skoog and Holler.
**Course Code:** CHA5403  
**Course Title:** Polymer Chemistry  
*(4 Credits)*

**Objectives:**

1. To understand concept and classification of polymer.
2. To learn different types of polymerization techniques.
3. To understand concept of chemical analysis of polymer based on different instrumental techniques.
4. To learn thermal behavior, electrical, optical and chemical properties of polymers.
5. To analyze average molecular weight of polymer and understand concept of molecular weight distribution curve.
6. To understand the concept of end group analysis of polymers.

### Unit-I  
**Introduction of Polymers:** Basic concepts, History of polymers, Classification of polymers, classification of polymers based on: Origin, structure, stereochemistry, synthesis, type of chain and mechanical properties  

### Unit II  
**Polymer synthesis mechanisms:**  
Chain polymerization (Free radical polymerisation, cationic and anionic polymerisation, co-ordination polymerisation) and step polymerization (Polycondensation, polyaddition and ring opening polymerisation).  
**Polymerization techniques:**  
bulk, solution, suspension, emulsion, melt polycondensation, interfacial condensation, solid and gas phase polymerization

### Unit III  
**Molecular Weight and Size of Polymers:**  
Average molecular weight, Number average and weight average molecular weight, size of polymers, degree of polymerisation, polydispersity, molecular weight distribution-fractionation methods (fractionation precipitation, fractional elution, gel permeation chromatography,), determination of molecular weight by- End group analysis, colligative properties measurements, dilution solution viscosity method (Huggins and Kraemer viscosity plot), molecular weight distribution curve (simple representation of MWD), problem solving.

### Unit IV  
**Properties of polymer:**  
**Glass Transition Temperature (Tg):** State of aggregation, state of phase, transition and associated properties, factors affecting on Tg, relation of Tg with molecular weight, Tg and copolymers, Tg and melting point, importance of Tg.  
**Crystallinity of Polymers:** Degree of crystallinity, Crystallisability, polymer crystallization, structural regularity, crystallites, Helix structures, spherulites, polymer single crystals, effect of crystallinity on polymer properties.  
**Polymer degradation:** Thermal degradation, mechanical degradation, photodegradation, degradation by ultrasonic waves, degradation by high energy radiation, oxidative degradation.  
**Polymer Solution:** Process of polymer dissolution, thermodynamics of polymer dissolution, effect of molecular weight, solubility of amorphous and crystalline system, The Flory-Huggins theory, nature of polymer molecules in solution.
### Unit-V

**Analysis and Testing of Polymers:**

- a. Chemical analysis of polymers: X-ray diffraction analysis, thermal analysis (TGA, DTA and DSC).
- b. Physical testing of polymers: Mechanical properties, Fatigue testing, impact testing, tear resistance, hardness, abrasion resistance.
- d. Optical properties: transmittance, color, gloss, haze and transparency.
- e. Electrical properties: dielectric constant and loss factor, resistively, dielectric strength, electronic properties.

### Unit VI

**Application of polymers:**

- Plastics, Natural and synthetic fibers, acrylic fibers, elastomers, adhesives.
- Polymer additives: Fillers, plasticizers, UV stabilizers and absorbers, antioxidants, flame retardants, colourants.

Elective Papers (Any Two)

Course Code: CHA5404
Course Title: Bioanalytical Methods
(2 Credits)

Objectives:
1. To introduce sampling methods for collection of blood and urine sample.
2. To study determination of different constituents from blood sample.
3. To study determination of different constituents from urine sample.
4. To study various types of human nutrients.
5. To study determination of carbohydrates from human nutrients by different methods.
6. To study determination of vitamins from human nutrients by Kjeldhal method and Lowry method.
7. To study determination of lipids from human nutrients by different methods.

| --- | --- | --- |
| Unit-II | Human-Nutrition:  
   a. Carbohydrates- Definition, functions and Analysis of total carbohydrates by Anthrone method, starch using Anthrone reagent, pectin by gravimetric method, and crude fibres.  
   b. Proteins- Definition, functions and analysis protein by Kjeldhal method and Lowry method, total free amino acids, methionine in food grain.  
   c. Vitamins- Definition, functions and analysis of Retinol, Vitamin D₃, Vitamin E, Vitamin B₁, Vitamin B₂, Vitamin B₆, Nicotinic acid, Niacin and Vitamin C.  
   d. Lipids- Definition, functions and analysis of free fatty acids, saponification value, iodine value and peroxide value. | 20L |

2. Chemical analysis of food by Pearson.
3. Practical Pharmaceutical Chemistry by Beckett
Course Code: CHA5405
Course Title: Pollution Monitoring and Control. (2 Credits)

Objectives:
1. To study methods of removal heavy toxic elements.
2. To understand different recovery techniques of waste water.
3. To understand hazardous effects of SO2.
4. To introduce economics of SO2 control measures.
5. To study determination of nitrogen in various form of samples.
6. To understand various effluent analysis processes.
7. To introduce photochemistry of air pollutions.
8. To introduce the concept of waste water treatment and analysis.
10. To study determination of different properties of water from waste.
11. To estimate toxic elements from waste water

Unit I  | Removal of Heavy Toxic Metals: Chromium, Mercury, Lead, Cadmium, Arsenic, analytical methods of determination of small amount of the metal pollutants, copper recovery, treatments of waste to remove heavy metals, recovery techniques. |
        | 8L |

Unit II | Removal of Sulphur Dioxide and Nitrogenous Materials Origin of SO2 and its hazards, Analysis of SO2 control methods, desulphurization of fuels, Indian coal and Indian crude oil. Economics of SO2 control measures. NOx, dissolved NOx, nitrites, ammonia, Urea and other nitrogen compounds in the effluent fertilizers explosive, industrial effluents, effluents from nitro aromatic industries, analytical methodology, photochemistry of air pollutions. |
        | 10L |

Unit III | Waste Water Analysis and Treatment Water pollutants, purpose of chemical analysis, sampling of water, pH of water, specific conductance, determination of acidity and alkalinity, Chemical oxygen demand, biological oxygen demand, dissolved oxygen, determination of aluminium, boron, calcium, carbon dioxide, chloride, residual chlorine, Chlorine demand, total hardness, nitrate, nitrite, ammonia nitrogen, sulphate, sulphide, anionic detergents, tannin and lignin. |
         | 12L |

Course Code: CHA5406  
Course Title: Nanotechnology  
(2 Credits)

Objectives:
1. To study fundamental concepts and various synthesis route of Nanomaterials.
2. To understand applications of Nanomaterials in various field.
3. To give an overview of nanotechnology in biomedical application.
4. To study use of nanomaterials in drug delivery, biomedical sensors and biosensors etc.
5. To study applications of nanomaterial as a probe for bioimaging
6. To give an overview of environmental impacts of nanotechnology.
7. To study engineered nonmaterial's in the body.
8. To study toxicological health effects of nanomaterial.

Scheme of Analytical Chemistry Practical Examination
CHA5407 : Practical Course III : Analysis of Consumer Products (Any Fifteen)

CHA5408: Practical Course IV : Analysis of Food and Pharmaceutical Products Practicals (Any Fifteen) / Project (Projects minimum 30%)

Note :
1. The practical examination in the subject will be conducted for SIX HOURS duration.
2. The practical examination in the subject will be conducted for 50 marks.
3. Certified Biochemistry Laboratory Journal is compulsory for the examination.
4. Oral/viva examination is compulsory
5. Book/s printed material, cyclostyled or typed material will be allowed during the practical examination.
6. Examiners will arrange Q1 and Q2 experiments for conducting practical examination.
7. Lucky draw system will be followed for the students for practical examination by the examiners.
8. Log table and calculators are allowed during the practical examination.
9. Mobile/s is/are strictly not allowed during the practical examination in laboratory.

The candidate has to perform the following question/s for practical examination.

| Q 1 | Major Experiment (Any ONE) | 20 Marks |
| Q 2 | Minor Experiment (Any ONE) | 20 Marks |
| Q 3 | Oral /Viva                | 05 Marks |
| Q 4 | Laboratory Journal        | 05 Marks |
|     | Total Marks               | 50 Marks |

Research Project

Note:
1. Certified RESEARCH PROJECT THESIS is compulsory for the examination.
2. The project presentation will be conducted for SIX HOURS duration.
3. The project presentation will be conducted for 100 marks.
4. Oral/viva examination is compulsory
5. Mobile/s is/are strictly not allowed during the project presentation.

Research Project Work is assessed as follows,
