### F.Y. B.A. MTA1101 Calculus - I No. of Credits: 3

The aim of this course is to understand the notion of limit and continuity of real valued functions of a real variable. The student should understand the notion of sequential continuity and apply it to solve the problems. Hence, the emphasis is more on limit and continuity of functions and less on sequences. Hence, various theorems about convergence of sequences are stated and good students can do them as an exercise or can give a seminar.

| No. | Title and Contents  | Number of |
|-----|---|-----------|
|     |   | Lectures  |
| 1   | Real Numbers:   | 16        |
|     | Algebraic and Order properties of Real numbers, Solution set of           |           |
|     | inequalities, Geometric Mean- Arithmetic Mean inequality, Bernoulli's     |           |
|     | inequality, Absolute Value of real numbers, Triangle inequality and its   |           |
|     | applications, Bounded set, Supremum (l.u.b.), Infimum (g.l.b.),           |           |
|     | Completeness property of real numbers, Archimedean property of R,         |           |
|     | Density of rational numbers in R, Intervals of real line, nested interval |           |
|     | property (statement only).  |           |
| 2   | Sequences and Series:   | 18        |
|     | Sequence: Definition of sequence, Limit of sequence, Uniqueness of        |           |
|     | limit, Bounded sequence, Tail of a sequence, Algebra of limits of         |           |
|     | sequences, Squeeze theorem for sequences, Ratio test for sequences,       |           |
|     | Monotone sequence, Monotone convergence theorem (Statement only),         |           |
|     | Subsequences, Divergence Criteria, Monotone subsequence theorem           |           |
|     | (statement only), Bolzano-Weierstrass theorem (statement only), Cauchy    |           |
|     | sequence (definition and examples only).                                  |           |
|     | Series:   |           |
|     | Definition, Sequence of partial sums, Convergent series and Divergent     |           |
|     | series, Some tests for convergence of series (statements and examples     |           |
|     | only).  |           |
| 3   | Limits:   | 14        |
|     | Limit of functions: Cluster point, Definition of limit, Limits of some    |           |
|     | standard functions, Sequential criteria for limits, Uniqueness of limit,  |           |
|     | Divergence criteria, Algebra of limits, Squeeze theorem for limit.        |           |

### F.Y. B.A. MTA1102 Algebra No. of Credits: 3

The aim of this course is to introduce the students with basic concepts in Mathematics such as relations, equivalence relations and functions. And, to introduce different techniques of proving the theorems such as induction, proof by contradiction etc. We introduce integers and complex numbers as important examples to study different algebraic structures.

| No. | Title and Contents   | Number of |
|-----|--|-----------|
| 1   | <b>Induction:</b> Well ordering principle for N, Principle of Mathematical induction, Strong form of Principle of Mathematical induction.  | 12        |
| 2   | <ul> <li>Sets, Relation and Functions:</li> <li>Power set, Operation on sets, Cartesian product of sets</li> <li>Definition of relation, equivalence relation, equivalence classes, Definition of partition, every partition gives an equivalence relation and vice-versa.</li> <li>Definition of function, Domain, co-domain and the range of function,</li> </ul>  | 10        |
|     | injective, surjective and bijective functions, composite function, invertible function   |           |

## F.Y. B.A. MTA1202 Analytical Geometry No. of Credits: 3

The aim of this course is to explain analytical geometry of two and three dimensions. The ideas from matrix algebra will occur in a subtle way. The concepts learnt here will be useful while learning calculus of several variables.

| No. | Title and Contents  | Number of |
|-----|---|-----------|
|     |   | Lectures  |
| 1   | Analytical geometry of two dimensions                       | 12        |
|     | 1. Locus of points  |           |
|     | 2. Change of Axes   |           |
|     | (a) Translation of Axis.                                    |           |
|     | (b) Rotation of axis.                                       |           |
|     | 3. Removal of xy term.                                      |           |
|     | 4. Invariants.  |           |
|     | 5. General Equation of second degree in x and y:            |           |
|     | 6. Centre of Conic.   |           |
|     | 7. Reduction to Standard form: +                            |           |
|     | (a) length of Axes  |           |
|     | (b) Equation of Axes  |           |
|     | (c) Co-ordinates of foci.                                   |           |
|     | (d) Eccentricity  |           |
|     | (e) vertex, Equation of directrix and latus rectum.         |           |
|     | 8. General Equation Representing Parabola.                  |           |
| 2   | Planes in Three Dimension                                   | 12        |
|     | 1. Rectangular Cartesian co-ordinates of a point in Plane.  |           |
|     | (a)Orientation of Axes                                      |           |
|     | (b) Co-ordinates of a point.                                |           |
|     | (c) Direction Angles, Direction Ratios, Direction Cosines.  |           |
|     | (d) Direction ratios of a line joining two points           |           |
|     | (e)Relation between Direction Ratios and Direction Cosines. |           |
|     | (f) Angle between two lines.                                |           |
|     | 2. General Equation of first degree.                        |           |
|     | 3. Normal form of the equation of a plane.                  |           |
|     | 4. Transform to the normal form.                            |           |
|     | 5. Angle between two planes                                 |           |
|     | 6. Determination of a plane under given conditions.         |           |
|     | 7. Plane passing through a given points.                    |           |
|     | 8. Plane passing through three points.                      |           |
|     | 9. System of planes   |           |
|     | 10. Two sides of planes.                                    |           |
|     | 11. Length of the perpendicular from a point to a plane.    |           |
|     | 12. Bisectors of angles between two planes                  |           |
|     | 13. Joint equation of two planes                            |           |
| 3   | Lines in Three Dimensions                                   | 12        |
|     | 1. Equation of line.  |           |
|     | (a) Symmetrical form of the equation of a line.             |           |
|     | (b) Equation of a line passing through two points           |           |
|     | (c) Transformation of the equation of a line from           |           |

|   | the asymmetric form to the symmetric form.                      |    |
|---|---|----|
|   | (d) Angle between a line and plane.                             |    |
|   | 2. Coplanar lines   |    |
|   | (a) Condition for a line to lie in a plane.                     |    |
|   | (b) Condition for two lines to be coplanar.                     |    |
|   | 3. Sets of condition which determines a line.                   |    |
|   | (a) Number of arbitrary constants in the equations of a         |    |
|   | straight line.  |    |
|   | (b) Sets of conditions which determine line.                    |    |
|   | 4. Skew lines and shortest distance                             |    |
|   | (a) To find the length and the equation of the line of shortest |    |
|   | distance between two lines.                                     |    |
|   | (b) Length of the perpendicular from a point to a line.         |    |
| 4 | Sphere  | 12 |
|   | 1. Equation of a sphere.  |    |
|   | (a) Sphere with a given diameter.                               |    |
|   | (b) Intercept form.   |    |
|   | (c) Equation of the sphere through four points.                 |    |
|   | 2. Plane section of a sphere.                                   |    |
|   | 3. Intersection of two spheres.                                 |    |
|   | 4. Sphere through a given circle.                               |    |
|   | (a) Sphere passing through the circle intersection of the given |    |
|   | sphere and plane.   |    |
|   | (b) Sphere passing through a circle which is the                |    |
|   | intersection of two spheres                                     |    |
|   | 5. Intersection of a sphere and a line.                         |    |
|   | 6. Equation of Tangent plane.                                   |    |
|   | (a) Standard equation of sphere.                                |    |
|   | (b) Equation of tangent plane                                   |    |
|   | (c) The condition of tangency.                                  |    |
