# Deccan Education Society's FERGUSSON COLLEGE (AUTONOMOUS), PUNE 

## Syllabus <br> for

## S.Y.B.Sc.

## (Computer Science_Mathematics)

[Pattern 2019]
(B.Sc. Semester-III and Semester-IV)

## From Academic Year 2020-2021

## Deccan Education Society's

Fergusson College (Autonomous), Pune

## S.Y. B.Sc. Computer Science_Mathematics (Pattern 2019)

From academic year2020-2021

| Particulars | Name of <br> Paper | Paper <br> Code | Title of Paper | No. of <br> Credits |
| :--- | :--- | :--- | :--- | :---: |
| S.Y. B.Sc. <br> Semester III | Theory <br> Paper - 1 | MTC2301 | Applied Algebra | 2 |
|  | Theory <br> Paper - 2 | MTC2302 | Operations Research | 2 |
|  | Practical <br> Paper -1 | MTC2303 | Mathematics Practical -III | 2 |
| S.Y. B.Sc. <br> Semester IV | Theory <br> Paper -3 | MTC2401 | Computational Geometry | 2 |
|  | Theory <br> Paper - 4 | MTC2402 | Multivariable Calculus | 2 |
|  | Practical <br> Paper -2 | MTC2403 | Mathematics Practical -IV | 2 |

| S.Y. B.Sc. Semester III |  |  |  |
| :--- | :--- | :--- | :---: |
| Title of the <br> Course and <br> Course Code | Applied Algebra <br> (MTC2301) | Number of <br> Credits :02 |  |
| Course Outcomes (COs) <br> On completion of the course, the students will be able to: |  |  |  |
| CO1 | Define linearly independent and dependent vectors. |  |  |
| CO2 | Discuss the concepts of vector spaces and subspaces. |  |  |
| CO3 | Apply concept of diagonalization (factorization) of a matrix using eigenvalues and <br> eigenvectors. |  |  |
| CO4 | Analyze norm, distance and angle between vectors to check similarities. |  |  |
| CO5 | Determine eigenvalues and eigenvectors of a given matrix. |  |  |
| CO6 | Generate matrix of a general linear transformation by evaluating kernel, range. |  |  |

| Unit No. | Title of Unit and Contents | No of <br> Lectures |
| :---: | :---: | :---: |
| I | Real vector spaces, Subspaces, Linear independence, Basis and <br> dimensions, Row space, Column space and null space, Rank and Nullity. | $\mathbf{1 2}$ |
| II | Linear Transformations <br> General linear transformations, Kernel and range. (Rank nullity theorem <br> without proof.), Inverse linear transformation, Matrix of a general linear <br> transformation. | $\mathbf{8}$ |
| III | Eigen Values and Eigen vectors <br> Eigen values and Eigen vectors (Definition only), <br> iagonalization(without proof), Application of Eigen values (Quadratic <br> form). | $\mathbf{8}$ |
| IV | Definition and elementary results, Length, distance and angle in Inner <br> product spaces, Cauchy Schwarz Inequality, Orthonormal bases, Gram- <br> Schmidt process, Orthogonal matrix and its equivalent conditions | $\mathbf{8}$ |

| S.Y. B.Sc. Semester III |  |
| :---: | :---: |
| Title of the Course and Course Code | Operations Research Number of <br> (MTC2302) Credits : 02 |
| Course Outcomes (COs) <br> On completion of the course, the students will be able to: |  |
| CO1 | Identify the role of Linear programming problem solving skills in real life business models. |
| CO2 | Distinguish between Transportation Problems and Assignment Problems. |
| CO3 | Demonstrate methods including graphs and linear programming to analyze and solve the Two-person, zero-sum games. |
| CO4 | Relate the theoretical problem solving techniques with their relative applications. |
| CO5 | Validate and apply the techniques constructively to make effective business decisions. |
| CO6 | Develop mathematical and computational modelling of real decision making problems. |

| Unit No. | Title of Unit and Contents | No of <br> Lectures |
| :---: | :--- | :---: |
| I | Modeling with Linear Programming <br> Two-Variable LP Model, Graphical LP Solution, Linear Programming <br> Applications, Production Planning and Inventory Control | $\mathbf{4}$ |
| II | The Simplex Method and Duality <br> LP Model in Equation Form, Transition from Graphical to Algebraic <br> Solution, The Simplex Method, Big M-Method, Special Cases in Simplex <br> Method, Dual formation, Primal Dual relation. | $\mathbf{1 2}$ |
| III | Transportation Model and Assignment Model <br> Definition: Transportation problem, Initial basic feasible solution by <br> Northwest Corner method, Least cost method, Voggel's approximation <br> method, Optimal solution by MODI method, The Assignment Model, <br> Hungarian Algorithm. | $\mathbf{1 2}$ |
| IV | Game Theory <br> Two-person Zero sum game, Algebraic method, Graphical method, <br> Dominance method for mxn game, LPP formation. | $\mathbf{8}$ |

| S.Y. B.Sc. Semester III |  |  |  |
| :--- | :--- | :--- | :---: |
| Title of the <br> Course and <br> Course Code | Mathematics Practical <br> (MTC2303) | Number of <br> Credits : 02 |  |
| Course Outcomes (COs) <br> On completion of the course, the students will be able to: |  |  |  |
| CO1 | Recall basic techniques, concepts of applied algebra and operations research. |  |  |
| CO2 | Compute Eigenvalues and Eigenvectors. |  |  |
| CO3 | Apply and test different mathematical concepts in python programming. |  |  |
| CO4 | Integrate the mathematical conceptual knowledge to write better programs. |  |  |
| CO5 | Discriminate different methods of assignment and transportation problems. |  |  |
| CO6 | Write programs for different sorting algorithms. |  |  |

## List of practicals (Compulsory $10+2$ Activity)

| Sr No. | List of practicals |
| :---: | :--- |
| $\mathbf{1}$ | Introduction to computations using Python-I |
| $\mathbf{2}$ | Introduction to computations using Python-II |
| $\mathbf{3}$ | Sorting of points with respect to standard rectangle/rectangular block |
| $\mathbf{4}$ | Finding pairs of points having least and greatest mutual distance |
| $\mathbf{5}$ | Sorting of points with respect to a line and with respect to a convex polygon |
| $\mathbf{6}$ | Simplex Method |
| $\mathbf{7}$ | Transportation Problem |
| $\mathbf{8}$ | Assignment Problem |
| $\mathbf{9}$ | Eigen values and Eigen vectors |
| $\mathbf{1 1}$ | Gram Schmidt process |
| $\mathbf{1 2}$ | Student activity - I |
| $\mathbf{1 3}$ | Student activity - II |

| S.Y. B.Sc. Semester IV |  |  |
| :--- | :--- | :--- |
| Title of the <br> Course and <br> Course Code | Computational Geometry <br> (MTC2401) | Number of <br> Credits :02 |
| Course Outcomes (COs) <br> On completion of the course, the students will be able to: |  |  |
| CO1 | State different types of projections on an object. |  |
| CO2 | Compute points of standard curves using recursive formulae. |  |
| CO3 | Demonstrate knowledge of key notions and principles related to 2 dimensional <br> transformations. |  |
| CO4 | Explain and implement the basic principles and theory of geometric algorithms. |  |
| CO5 | Evaluate 3D transformations. |  |
| CO6 | Construct Bezier curves of order 2 and order 3. |  |

| Unit No. | Title of Unit and Contents | No of <br> Lectures |
| :---: | :--- | :---: |
| I | Two dimensional transformations <br> Introduction, Representation of points, Transformations and <br> matrices, Transformation of points, Transformation of straight <br> lines, Midpoint transformation, Transformation of parallel <br> lines, Transformation of intersecting lines, Transformation: <br> rotations, reflections, scaling, shearing, Concatenation of <br> transformations, Solid body transformations, homogeneous <br> coordinates, Translation, Rotation about an arbitrary point, <br> Reflection through an arbitrary line, Overall Scaling, Point at <br> infinity. | $\mathbf{1 2}$ |

|  | Curve fitting (up to $\mathrm{n}=3$ ), equation of the curve in matrix form (up <br> to $\mathrm{n}=3$ ),,$^{\text {st }}$ and $2^{\text {n }}$ Derivative. |  |
| :--- | :--- | :--- |

| S.Y. B.Sc. Semester IV |  |
| :---: | :---: |
| Title of the Course and Course Code | Multivariable Calculus Number of <br> (MTC2402) <br> Credits :02  |
| Course Outcomes (COs) <br> On completion of the course, the students will be able to: |  |
| CO1 | Recall series expansion of single variable functions. |
| CO2 | Interpret the properties of continuous, derivable functions and mean value theorems. |
| CO3 | Apply concepts of double and triple integrals to solve various problems. |
| CO4 | Explain higher order partial derivatives and their applications. |
| CO5 | Evaluate limits of multi variable functions. |
| CO6 | Create optimization algorithms using the gradient and extrema of multi variable functions. |

| Unit No. | Title of Unit and Contents | No of <br> Lectures |
| :---: | :--- | :---: |
| I | Partial Differentiation <br> Functions of several variables, Level curves and surfaces, Limits and <br> continuity, Partial differentiation, Tangent planes, Chain rule, <br> Directional derivatives, The gradient, Maximal and normal properties <br> of the gradient, Tangent planes and normal lines. | $\mathbf{9}$ |
| II | Differentiation <br> Higher order partial derivatives, Total differentiation and <br> differentiability, Jacobians, Change of variables, Euler's theorem for <br> homogenous functions, Taylor's theorem for functions of two <br> variables and more variables. | $\mathbf{9}$ |
| III | Extrema of functions and Vector Field <br> Extrema of functions of two and more variables, Method of Lagrange <br> multipliers, Constrained optimization problems, Definition of vector <br> field, Divergence, curl, gradient and vector identities. | $\mathbf{9}$ |
| IV | Double and Triple Integrals <br> Double integration over rectangular and non rectangular regions, <br> Double integrals in polar coordinates, Triple integral over a <br> parallelepiped and solid regions, Volume by triple integrals, Triple <br> integration in cylindrical and spherical coordinates, Change of <br> variables in double and triple integrals, Dirichlet integrals. | $\mathbf{9}$ |

| S.Y. B.Sc. Semester IV |  |  |  |
| :--- | :--- | :--- | :---: |
| Title of the <br> Course and <br> Course Code | Mathematics Practical <br> (MTC2403) | Number of <br> Credits :02 |  |
| Course Outcomes (COs) |  |  |  |
| CO1 | Recall 2 dimensional and 3 dimensional transformations. |  |  |
| CO2 | Illustrate the concepts in the vector field. |  |  |
| CO3 | Solve interpolation problems by writing python programs. |  |  |
| CO4 | Analyze and implement all geometric algorithms. |  |  |
| CO5 | Evaluate problems of differentiation, extrema of functions. |  |  |
| CO6 | Generate equidistant points on the boundary of the standard circle/ellipse. |  |  |

List of practicals (Compulsory $10+2$ Activity)

| Sr No. | Title of practicals |
| :---: | :--- |
| $\mathbf{1}$ | Newton forward Interpolation |
| $\mathbf{2}$ | Newton backward Interpolation |
| $\mathbf{3}$ | Newton divided difference method |
| $\mathbf{4}$ | Lagrange's method for interpolation |
| $\mathbf{5}$ | 2-D Transformations |
| $\mathbf{6}$ | Generation of equidistant points on boundary of standard circle / ellipse |
| $\mathbf{7}$ | 3-D Transformations |
| $\mathbf{8}$ | Differentiation |
| $\mathbf{9}$ | Extrema of functions and Vector Field |
| $\mathbf{1 0}$ | Plane curves and Be'zier curves |
| $\mathbf{1 1}$ | Student activity - I |
| $\mathbf{1 2}$ | Student activity - II |
